## ALIGNMENTS

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucosos residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein. New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids. Helicobacter pylori fucosyl transferase, FutA, protein, SEQ ID NO: 20. Bezila DJ; Fucosyltransferase; protein production; enzyme Johnson KF, Claim 2; SEQ ID NO 20; 97pp; English. This is the amino acid sequence of the novel alpha-1,3-
fucosyltransferase of Helicobacter pylori NGTC 11639, as deduced from the
newly isolated fucT gene (see AAV80321). The enzyme is characterised by 8
c-terminal heptad repeats and by the lack of a transmembrane domain. The
absence of a transmembrane domain allows the enzyme to be readily
released from recombinant host cells. The enzyme can be used in the
production of fucosylated oligosaccharides such as Lewis X, Lewis Y and
sialyl Lewis X, which are structurally similar to certain tumour
associated antigens found in mammals. These glycoconjugates also have
mammalian tumours. The enzyme can also be used to raise specific
antibodies. Inhibition of abnormal fucT gene product activity can be used
for the treatment of innestinal mucosal disease. (Updated on 17-OCT-2003
to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   236
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              238

fucosyltransferase gene product activity. The nucleic acid is useful as part of ribozyme and/or triple helix sequences and for alphal, 3-fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or call are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, fucosyltransferase encdoed by the fucT gene. (Updated on 29-AUG-2003 to standardise OS field)

The invention relates a purified transmembrane segment-free alpha 1,3-
fucosyltransferase polypeptide, having a repeat of the sequence: X_1-X_2-
Leu-Argy, A=X 4-Tyr, where X:1, X=2 and X 4 is a Asp or Asn; and X=1 is

[11e, Val or Ala. Also included are the nucleic acid encoding the protein

(including its complement or fragment), a vector containing the nucleic

acid, a host cell containing nucleic acid or vector, an antibody which

selectively binds to the protein and a gene expression system for

comprising a host cell modified with the nucleic acid or its

comprising a host cell modified with the nucleic acid or its

comprising thost cell modified with the nucleic acid or its

comprising the protein with a substrate such as LackAc-R and GDP-fucose,

contacting the protein with a substrate, to produce oligosaccharides

contacting the protein with a substrate, to produce oligosaccharides

and purifying the host cell with a substrate, to produce oligosaccharides

and purifying the obtained oligosaccharides. The nucleic acid is useful

contacting the nucleic acid using polymerase claid, by contacting a sample with a

cucleic acid probe that hybridissation of the probe; or by

polynucleotide, and detecting hybridisation of the probe; or by

tucosyltransferase-fusion protein, by growing the host cell containing a

cucro operably linked to a polynucleotide encoding a desired polypeptide

cor peptide under conditions which allow expression and secretion of the

cup protein and isolating the fusion protein. The antibody is useful

cor peptide under conditions which allow expression and secretion of the

cor peptide under conditions which allow expression and secretion of the

cor peptide under conditions which allow expression and secretion of the

Futh and FutB) of Helicobacter pylori (H. pylori). Specifically, it referse to alpha 1-3/4 fucosyltransferase enzymes (FutA and FutB) of Helicobacter pylori (H. pylori). Specifically, it referse to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expression systems. This polypeptide sequence is an H. pylori strain 1218 FutB protein sequence of the invention. This invention relates to novel isolated polynucleotides and the encoded New isolated polynucleotide encoding fucosyltransferase protein, usefu for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids. 1 MFQPLLDAYIESASIEKITSKSPPPLKIAVANWW--GDEEVEFKKNILYFILSQHYTIT 119 YLRMPLYYDRIHHKAESVNDTTSPYKLKDDSLYALKKPSHHFKENHPNLCAVVNNESDPL 239 ENSQGYGYVTEKIIDAYFSHTIPIYWGSPSVAQDFNPKSFVNVCDFKDFDEAIDHVRYLH LHSNPNEBSDLVPGNPLEQARKILSYQNTKRVFYTGENEVPNFNLFDYAIGFDELDFNDR 119 YLRMPLYYAYLHYKAMLVNDTTSPYKLK--ALYTLKKPSHKFKENHPNLCALIHNESDPW 297 AHQNAYLDMLYENPLNTIDGKAGFYQDLSFEKILDFFKNILENDTIYHCNDAHYSALHRD 1 MFQPLLDAFIDSTHLDBTTHK--PPLNVALANWWPLKNSEKKGFRDFILHFILKQRYKII KRGFASFVASNPNAPIRNAFYDALNAI EPVASGGSVKNTLGYKVKNKNEFLSQYKFNLCF ENSOGYGYVTEKILDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFNNFDEAIDYIRYLH FutA; FutB; alpha 1-3/4 fucosyltransferase; glycoprotein; glycolipid; 30; Length 485; 47; Indels fucose; N-acetylglucosamine; glycoconjugate; enzyme. The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.

The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a sylycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MFQPLLDAYIESASIEKITSKSPPPLKIAVANWW--GDESVEEFKKNILYFILSQHYTIT 58

chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to Nactification of actylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to strain 1182 FutB protein sequence of the invention.

                                                                                                                                                                     This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose readiue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              176

fucosyltransferase gene product activity. The nucleic acid is useful as part of ribozyme and/or triple helix sequences and for alphal, 3-fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, 3 fucosyltransferase encood by the fucT gene. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                       58
                                                                                                                                                                                                                                                                                                                                            58
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Enzyme, fucT; alphal,3 fucosyltransferase; oligosaccharide; Lex; Ley; sLex; Helicobacter pylori infection; malignant cell; mammalian tumour.,

the invention relates a purilled transmemorane segment-rice apprair. C. fucosyltransferase polypeptide, having a repeat of the sequence: X 1-X 2 leu-Arg-X_3-X_4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is [11e, Val or Ala. Also included are the nucleic acid encoding the protein (including its complement or fragment), a vector containing the nucleic acid, a host cell containing nucleic acid or vector, an antibody which selectively binds to the protein and a gene expression system for selectively binds to the protein and a gene expression system for comprising a host cell modified with the nucleic acid or its conforting the protein with a substrate such as LackAck. R and GDP-fucose, comparating the protein with a substrate such as LackAck. B by contacting the protein with a substrate such as LackAck. R and GDP-fucose, and purifying the protein with a substrate such as LackAck. R and GDP-fucose, and purifying the protein with a substrate, to produce oligosaccharides, or by culturing the cell, or contacting the protein with a substrate, to produce oligosaccharides and purifying the nucleic acid, by contacting a sample with a nucleic acid using polymerase chain reaction (PCR). The polymucleotide, and detecting hybridisation of the probe; or by polymucleotide, and detecting pyprucleotide encoding a desired polypeptide or polymucleotide, and detecting pyprucleotide encoding a desired polypeptide or polymucleotide, and detecting pyprucleotide encoding a desired polypeptide or polymucleotide under conditions which allow expression and secretion in the crosyltransferase fusion protein, by growing the host cell containing a sample. The protein and isolating the fusion protein. The antibody is useful as manner is an and for inhibiting abnormal alpha1,3-c fucosyltransferase gene product activity. The nucleic acid is useful as useful in the development of assays to detect the protein or cell are useful in the development of assays to detect the protein or cell are useful in the development of assays to detect the p
                                                                                                                                                                                                                                          The invention relates a purified transmembrane segment-free alpha 1,3-
                                                                                                     Purified transmembrane segment-free alphal, 3-fucosyltransferase polypeptide useful for producing fucosylated oligosaccharides.
                                                                                                                                                                                     Claim 6; Fig 6; 37pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       standardise OS field)

Purpopositions thereof, which are related to the fucosyltransferase enzymes (FutA and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to Nactylucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to strain 1111 FutA protein sequence of the invention. 299 THPNAYLDMLYENPLNTLDGKAYFYQNLSFKKILDFFKTILENDTIYHDNPFIF---YRD 355 454 435 This invention relates to novel isolated polymucleotides and the encoded New isolated polynucleotide encoding fucosyltransferase protein, usefu for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids. 412 ------DHDDLRRDHERLLSKATPLLELSQNTSFKIYRKAYQKSLPLLR Futh, Futh; alpha 1-3/4 fucosyltransferase; glycoprotein; glycolipid; fucose; N-acetylglucosamine; glycoconjugate; enzyme. which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.

ribosome releasing factor (OO, TP) PFB0390w [imported] - malaria parasite (Plasmodium fall NiAlernate names: ribosome recycling factor Cippecies: Plasmodium falciparum falciparum falciparum falciparum falciparum (Cipate: 13-Nov-1998 #sequence_revision 13-Nov-1998 #text_change 09-Jul-2004 Rigardner, M.J.; Tettelin, H.; Carucci, D.J.; Cummings, L.M.; Aravind, L.; Koonin, B.V.; Spertea, M.; Salzberg, S.; Zhou, L.; Sutton, G.G.; Clayton, R.; White, O.; Smith, H.O.; Science 282, 1126-1132, 1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              R.Oulmouden, A.; Wierinckx, A.; Petit, J.M.; Julien, R. submitted to the EMBL Data Library, June 1995
A.Description: Molecular cloning and expression of bovine alpha (1,3/4)-fucosyltransferate A.Reference number: $55498
A.Reference number: $55498
A.Status: preliminary
A.Molecule type: DNA
A.Molecule type: DNA
A.Residues: 1-365 <0UL>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A;Residues: 1-498 cGAR>
